Creatinine* [Serum] Serum, SH-QTKT-CREAB-004, [Abbott] Alinity c	108.00 1.22	53 - 114.9 0.60 - 1.30	µmol/L mg/dL
Estimated Glomerular Filtration Rate (eGFR) Serum, SH-QTKT-CREAB-004, [Abbott] Alinity c	**75.11**	≥ 90	mL/min/1.73m²
Interpretation eGFR (estimated glomerular filtration rate) is a non-invasive measure of kidney function, calculated by using blood creatinine levels, age, and gender. A low eGFR indicates potential kidney affection and an increased risk of chronic kidney disease. Early detection improves the chances of managing kidney disease effectively. However, accuracy may be affected by factors like age (younger than 18 and more than 70), pregnancy, overweight, increased muscle bulk, dehydration, or medications such as NSAIDs and ACE inhibitors. Further evaluation by a specialist may include additional tests to assess kidney health. For individuals under 18 years of age, the Schwartz equation is applied. For individuals aged 18 years and older, the CKD-EPI 2021 equation is applied.
